

Founder Deployment Authority

LAGNAF™ Network LLC | AUTOAPPEAL™ | Phase 2 Completion Package

Locked Authority

The Founder exclusively controls production domain selection, DNS routing, Vercel production deployment, environment variable release, GitHub access, production credentials, treasury/payment systems, and final go-live approval.

No phase, patch, connection, public launch, API activation, or routing change may be treated as production-ready until the Founder approves the QA report in writing.

Minimum Go-Live Rule

No build may go live without a minimum 90-point QA score. If the QA score is exactly 90, Jason must submit a written correction roadmap for the remaining items before launch approval.

Credential Handling

Production credentials must be entered only into approved secure locations. They must not be committed to GitHub, pasted into frontend code, sent through unsecured chat, or exposed in logs.
